

Training and development (palliative medicine)

This page provides useful information on the training and development for this specialty and also has tips for people at all stages of their training including medical school.

You will need to complete core training after your two-year foundation programme. Core training has a choice of pathways:

- core medical training [1] ? CMT, which is a two-year programme
- acute care common stem ? ACCS (acute medicine), which is a three-year programme
- evidence of achievement of core medicine competencies at the time of application. Doctors who have undertaken alternative career pathways, including general practice and core training in emergency medicine, surgery and anaesthetics, will also be eligible to apply for higher specialty training if they can demonstrate that they have met the required criteria. (See the GMC palliative medicine curriculum [2] for further details).

Applicants for specialty training at ST3 should also hold the full MRCP (UK [3]), though alternative fellowship/membership exams are also accepted (see person specification [4]).

Trainees can enter specialty training in palliative at ST3 level. ?Not all applicants who meet the required standard to continue will necessarily be offered a post due to the level of competition. ST3 training takes a minimum of four years.

- The JRCPTB has detailed information on the curriculum and assessment for palliative medicine [5]
- The approved postgraduate training programme for palliative medicine is available from the GMC. [2]

Getting in tips

It is important to develop your practical skills and interest in palliative medicine as early as you can. This will also give you valuable experience to add to your CV.

Whether you're a medical student, foundation trainee or doing your core specialty training, there's information below to help you.?

- Medical students

Expand / collapse

- opportunities in medical training to visit palliative medicine departments is limited so make an effort to find out about this specialty
- join your university medical society
- attend conferences for medical students ? many are free ? this will give you an opportunity to network and meet your future colleagues

- get involved with the GMC (General Medical Council), eg medical students can participate in visits to medical schools as part of the GMC's quality assurance process
- consider joining the specialist society for your chosen specialty as a student member, eg Association of Palliative Medicine [6]
- consider becoming a student member of the BMA (the British Medical Association [7] is the trade union and professional association for doctors and provides careers advice)
- make your specialty decisions in good time so that you can test it out before committing yourself, eg by using hospital visits and clinical placements arranged as part of your course to ask questions and observe people at work
- choose the topic of your supervised research project carefully to test out your career thinking
- Foundation trainees

Expand / collapse

- remember your first priority is to demonstrate that you have developed the personal, learning, clinical, practical and management skills needed by all doctors
- think laterally when applying for rotations ? vacancies may not be available in palliative medicine so apply for a rotation in a related field
- talk to your clinical and educational supervisors about particular areas of interest to explore
- use full placements to experience specialties that you might be interested in or apply for taster experiences if you can't get a placement
- don't just look at the bigger specialties when considering your career choice
- talk with your peers about their career ideas and experiences ? you may be able to help each other
- listen to information and advice from more experienced doctors but make your own decisions
- taking part in a clinical audit is important for your development as a doctor but you may be able to choose an audit project related to a specialty that interests you
- ensure your Foundation e-portfolio has plenty of medical evidence and that this is kept properly up-to-date
- try to gain teaching and management experience
- look at competition ratios (ie the number of applicants to places) critically. Find out what is happening this year and spot any regional differences in competition ratios
- view the careers resources on the Foundation Programme website [8]
- write case reports or make presentations with a palliative medicine focus
- enter essay prizes and competitions
- Core and specialty trainees

Expand / collapse

- ensure a good grounding in acute general medicine
- join the [Association of Palliative Medicine \[6\]](#) and get help with navigating your way through specialty training
- speak to consultants about what the role is like
- read as much information as you can on the websites of relevant professional bodies
- question your own perceptions and possible negative stereotypes of the specialty
- impress interviewers by showing that your interest in the specialty is intrinsically motivated, ie you are drawn to the work and not just attracted by admiration of someone you have shadowed (You will also be happier in your career in that specialty many years later!)
- be prepared to move to where the vacancies are
- continue to develop your practical and academic expertise
- undertake a research project
- try to get some of your work published and present at national and international meetings
- join or start a Journal Club (a group who meet to critically evaluate academic research)
- teach junior colleagues

- take on any management opportunities you are offered
