Paediatric surgery

Paediatric surgeons work with young patients – from premature and unborn babies to children and young adults up to the age of 19.

This page provides useful information on the nature of the work, the common procedures/interventions, sub-specialties and other roles that may interest you.

Nature of the work

Paediatric surgeons might be performing surgery for a tiny baby born at 25 weeks’ gestation or for a six-foot teenager!

The types of surgery are wide-ranging and include:

- abdominal
- thoracic (oesophageal, lung and bronchial anomalies)
- trauma surgery
Specialist paediatric surgery includes:

- neonatal surgery (often for congenital abnormalities such as defects in the abdominal wall and diaphragmatic hernia)
- major intestinal surgery
- major trauma surgery
- oncology surgery

Only 11% of operations on children are carried out by paediatric surgeons. The remainder are performed by other specialist surgeons, some of whom specialise in paediatric cases. These include general, orthopaedic, plastic, oral and ophthalmic surgery as well as ENT and urology. Specialist adult surgeons may work in partnership with paediatric surgeons to treat uncommon childhood disorders such as thyroid and certain gastrointestinal conditions.

Surgery is only part of the work. You’ll also attend outpatient clinics and ward rounds where you’ll meet your patients and their parents or carers. Reassurance and advice for concerned parents is an important part of your job.

Most specialised children’s surgery is performed in dedicated children’s hospitals or in paediatric surgical units within larger hospitals. Approximately 338 surgeons work in 29 centres of this kind in the UK. The consultant paediatric surgeon leads a team of health professionals who diagnose, treat and support children with a wide range of conditions, including those diagnosed antenatally.

“Surgery is very satisfying as you make a decision to perform an operation and you can see immediate results”. Kathryn Evans, Consultant paediatric surgeon, St George’s University Hospitals NHS Foundation Trust.

Read Kathryn’s story [4]

**Common procedures/interventions**

Non-specialist elective paediatric surgery may include the management of common problems including hernias, circumcision or undescended testis.

Emergency procedures include appendectomy, correction of torsion of the testis and correction for the narrowing of the opening between the stomach and the intestine.

Paediatric surgeons often perform complex surgery on children with disabilities to improve their standard of living.

**Sub-specialties**

- urology
There is an increasing trend for consultants to develop further specific expertise in areas of special interest which include:

- neonatal surgery
- urological surgery
- hepatobiliary surgery
- gastrointestinal surgery
- oncological surgery

Some consultants have an interest in paediatric orthopaedics, paediatric neurosurgery and paediatric cardiothoracic, but they come from orthopaedic, neurosurgery and cardiothoracic surgical training routes, rather than paediatric surgery.

  Read about consultant and non-consultant roles in paediatric surgery, flexible working and about wider opportunities.

Consultant roles

You can apply for consultant roles six months prior to achieving your Certificate of Completion of Training (CCT). You will receive your CCT at the end of your paediatric surgery training.

Managerial opportunities for consultants include:

- clinical lead - lead NHS consultant for the team
- clinical director - lead NHS consultant for the department
- medical director - lead NHS consultant for the Trust

Most NHS consultants will be involved with clinical and educational supervision of junior
Here are some examples of education and training opportunities:

- **director of medical education** - the NHS consultant appointed to the hospital board who is responsible for the postgraduate medical training in a hospital. They work with the postgraduate dean to make sure training meets GMC standards.
- **training programme director** - the NHS consultant overseeing the education of the local cohort of trainee doctors eg foundation training[14] programme director. This role will be working within the LETB/deanery
- **associate dean** - the NHS consultant responsible for management of the entirety of a training programme. This role will be also be working within the LETB/deanery

**SAS doctor roles**

SAS surgeons (Staff, Associate Specialists and Specialty Doctors) work as career grade specialty doctors who are not in training or in consultant posts. You will need at least four postgraduate years training (two of those being in a relevant specialty) before you can apply for SAS roles.

The role of an SAS surgeon can vary greatly. Depending on your experience you might work on complex surgery or relatively minor diagnostic and outpatients work. SAS doctors will frequently participate in routine and elective[5] surgery rather than emergency work. They may also train other staff.

Some surgeons are attracted to the SAS role as the hours are more regular than those of the consultant, and you're paid for on-call work and overtime beyond 7am-7pm.

Find out more information on the SAS doctor roles[15].

**Other non-training grade roles**

These roles include:

- trust grade
- clinical fellows

**Academic pathways**

If you have trained on an academic plastic surgery pathway or are interested in research there are opportunities in academic medicine.

For those with a particular interest in research, you may wish to consider an academic career in plastic surgery. Whilst not essential, some doctors start their career with an Academic Foundation post. This enables them to develop skills in research and teaching alongside the basic competences in the foundation curriculum[16].

Entry into an academic career would usually start with an Academic Clinical Fellowship (ACF) and may progress to a Clinical Lectureship (CL). Alternatively some trainees that begin with an ACF post then continue as an ST trainee on the clinical programme post-ST4.
Applications for entry into Academic Clinical Fellow posts are coordinated by the National Institute for Health Research Trainees Coordinating Centre (NIHRTCC). There are also numerous opportunities for trainees to undertake research outside of the ACF/CL route, as part of planned time out of their training programme. Find out more about academic medicine.

The Clinical Research Network (CRN) actively encourages all doctors to take part in clinical research.

Other opportunities

There are excellent opportunities for a broad-based career in paediatric surgery, which could include teaching, external examining, research, writing and committee participation. Full-time academic posts are rare.

The opportunities for private practice within paediatric surgery are very limited.

- Job market and vacancies Expand / Collapse
  This section provides useful information about the availability of jobs, how to find vacancies and sources of further information.

Job market information

Paediatric surgeons comprise about 2% of surgeons overall, making this a small surgical specialty.

Paediatric surgery had 191 consultants and 158 medical registrars in England (NHS Digital, 2016)

In 2016 the competition ratio for Core Surgical Training was 2.53, and it was 4.08 for ST3 paediatric surgery (NHS Specialty Recruitment, 2016)

Women comprise about 15% of paediatric surgeons at present although clearly this is set to rise. In the near future flexible training (for men and women) is much easier and more possible than it has been in the past. The relatively low rate of emergency paediatric surgery also makes part-time working a more viable option.

Core and paediatric surgery training programmes are now open to those who want to train less than full time (LTFT) or job-share.

The numbers of paediatric surgeons is set to increase to 240 FTE in 2020, an increase of 80%. However, it may be that supply begins to outstrip demand.

Where to look for vacancies

Applications for core surgery training are made via the Core Surgery National Recruitment Office [26].

Registration and application for core surgery and specialist training is online via Oriel [27].

The national recruitment for paediatric surgery specialty training ST3 is handled by Health Education England, Yorkshire and the Humber local office [28].

The training programmes are open to those who want to train less than full-time (LTFT) – you should apply and request this after getting the job. Restrictions apply.

Further details person specifications and application deadlines are also available on the Oriel site [29].

Northern Ireland has its own recruitment process. For further details please visit the Northern Ireland Medical and Dental Training Agency [30] website.
