Intensive care medicine

Doctors working in intensive care medicine (ICM) manage critically ill patients with, at risk of, or recovering from, potentially life-threatening failure of any of the body’s organ systems.

This page provides useful information on the nature of the work, the common procedures/interventions, sub-specialties and other roles that may interest you.

Nature of the work

Doctors in this specialty (also called critical care medicine) are involved in all aspects of care of the critically ill. This includes providing organ system support and the investigation, diagnosis, and treatment of acute illness. It also includes systems management and patient safety, ethics, end-of-life care and the support of families.

As an intensivist or trainee in ICM you will help to treat various conditions, including:

- heart and cardiovascular failure
renal (kidney) failure
liver failure
patients with reduced levels of consciousness or neurological impairment (including weakness)
gastrointestinal failure
respiratory [3] failure
sepsis [4] – a serious immune system reaction triggered by infection
patients with severe trauma
acute intoxications and poisoning
patients recovering from major surgery
maternal complications around the time of birth of a child

Common procedures/interventions

These include:

- assessment, monitoring and review of patients with or at risk of developing critical illness
- provision of organ system support, including:
  - use of inotropes (drugs that stimulate the heart) and vasopressors (drugs that raise reduced blood pressure)
  - mechanical ventilation – using a machine known as a ventilator to assist breathing
  - invasive monitoring, including arterial cannulation where a tube known as a cannula is inserted into a blood vessel, usually for the delivery or removal of fluids
  - endotracheal intubation – a flexible tube is inserted through the nose or mouth into the trachea for artificial ventilation or for the administration of gases during anaesthesia
  - percutaneous dilatational tracheostomy – a minimally invasive procedure where the trachea (wind-pipe) is opened from the front of the neck to enable air to be passed into the lower air passages
  - measurement of cardiac (heart) output
- renal (kidney) support using haemodialysis [5] or haemofiltration (techniques used to ‘purify’ the blood of patients with kidney failure
- transfer of critically ill patients for specialist investigations and interventions such as CT scans [6]

Sub-specialties

Trainees who are training in ICM as a single specialty will have the opportunity to develop a ‘special skill’ or interest during their training. The ICM curriculum currently includes the following ‘special skills’ years*:

- academic research
- cardiac intensive care [1] medicine
- echocardiography
- extra-corporeal membrane oxygenation (ECMO)
- education
- home ventilation
- neuro intensive care [1] medicine
- paediatric intensive care [1] medicine
pre-hospital emergency medicine (PHEM)
quality improvement in healthcare
transfer medicine

* It is expected that additional options will be available in the future as the specialty develops.

Many intensivists are ‘dual trained’ in ICM along with one of ICM’s partner specialties. Common partner specialties include anaesthesia, acute internal medicine, emergency medicine, renal medicine and respiratory medicine. Those consultants who are ‘dual trainees’ often work in both specialties: the proportion of time spent in each of the specialties is very variable and is based both on an individual consultant’s preference, and/or service requirements.

Pay and conditions

Expand / collapse

This section provides useful information about the pay for junior doctors (doctors in training), SAS doctors (specialty doctors and associate specialists) and consultants.

Find out more about the current pay scales for doctors, and there's more information on the BMA website.

NHS employers provides useful advice and guidance on all NHS pay, contracts terms and conditions.

Medical staff working in private sector hospitals, the armed services or abroad will be paid on different scales.

Where the role can lead

Expand / collapse

Read about consultant and non-consultant roles in intensive care medicine, flexible working and about wider opportunities.

Consultant roles

You can apply for consultant roles six months prior to achieving your Certificate of Completion of Training (CCT). You will receive your CCT at the end of your intensive care medicine training.
Managerial opportunities for consultants include:

- clinical lead - lead NHS consultant for the team
- clinical director - lead NHS consultant for the department
- medical director - lead NHS consultant for the Trust

Most NHS consultants will be involved with clinical and educational supervision of junior doctors.

Here are some examples of education and training opportunities:

- director of medical education - the NHS consultant appointed to the hospital board who is responsible for the postgraduate medical training in a hospital. They work with the postgraduate dean to make sure training meets GMC standards.
- training programme director - the NHS consultant overseeing the education of the local cohort of trainee doctors e.g. foundation training programme director. This role will be working within the LETB/deanery
- associate dean - the NHS consultant responsible for management of the entirety of a training programme. This role will be also be working within the LETB/deanery

Opportunities within intensive care medicine are diverse and rapidly evolving. Active research and audit opportunities exist in most critical care departments at both national and international level. Most units will have extensive teaching programmes for all grades of staff from every discipline. Multidisciplinary teaching is very much encouraged.

Opportunities exist to apply for consultant posts. A recent survey showed that most consultants combine ICM with anaesthesia. Single ICM consultant posts tend to be based in larger Trusts at present. Small numbers of consultants combine ICM with other specialties such as respiratory medicine and emergency medicine.

**SAS doctor roles**

SAS doctors (Staff, Associate Specialists and Specialty Doctors) work as career grade specialty doctors who are not in training or in consultant posts. You will need at least four postgraduate years training (two of those being in a relevant specialty) before you can apply for SAS roles.

Further information on the SAS doctor role is on this site.

**Other non-training grade roles**

These roles include:

- trust grade
- clinical fellows

**Academic pathways**

If you have trained on an academic intensive care medicine pathway or are interested in research there are opportunities in academic medicine.
For those with a particular interest in research, you may wish to consider an academic career in intensive care medicine. Whilst not essential, some doctors start their career with an Academic Foundation post. This enables them to develop skills in research and teaching alongside the basic competences in the foundation curriculum.

Entry into an academic career would usually start with an Academic Clinical Fellowship (ACF) and may progress to a Clinical Lectureship (CL). Alternatively some trainees that begin with an ACF post then continue as an ST trainee on the clinical programme post-ST4.

Applications for entry into Academic Clinical Fellow posts are coordinated by the National Institute for Health Research Trainees Coordinating Centre (NIHRTCC).

There are also numerous opportunities for trainees to undertake research outside of the ACF/CL route, as part of planned time out of their training programme. Find out more about academic medicine.

The Clinical Research Network (CRN) actively encourages all doctors to take part in clinical research.

Other opportunities

There are opportunities to be employed by the NHS, academic institutions, private sector, universities, the armed forces, organisations and national governing bodies.

Opportunities within intensive care medicine are diverse and rapidly evolving. Active research and audit opportunities exist in most critical care departments at both national and international level. Most units will have extensive teaching programmes for all grades of staff from every discipline. Multidisciplinary teaching is very much encouraged.

Opportunities exist to apply for consultant posts. A recent survey showed that most consultants combine ICM with anaesthesia. Single ICM consultant posts tend to be based in larger Trusts at present. Small numbers of consultants combine ICM with other specialties such as respiratory medicine and emergency medicine.

- Job market and vacancies

Expand / collapse

This section provides useful information about the availability of jobs, finding vacancies and where to find out more.

Intensive Care had 508 Consultants and 666 Medical Registrars in England (NHS Digital, 2016)

Job market information

This is one of the newest specialties. Previously, most intensivists came from an anaesthetics background and job market recording did not separate them. The 2010 NHS census records a headcount of 5,618 (5,475FTE) anaesthetic and ICM consultants employed in England with women making up 30% of the anaesthetic and ICM consultant
workforce. The FICM census indicates there are around 2000 consultants with ICM sessions.

Flexible training is well-established in intensive care [1] medicine and opportunities for flexible working exist throughout your career.

There were 74 accepted offers by trainees for ICM specialty training level 3 (ST3) posts and the fill rate was 89 per cent in 2013-14. Update to 2014-2015 data – There were 104 accepted offers by trainees for ICM specialty training level 3 (ST3) posts and the fill rate was 96% in 2014-2015.

There were 74 accepted offers by trainees for ICM specialty training level 3 (ST3) posts and the fill rate was 89 per cent in 2013-14.

The single ICM certificate of completion of training [13] (CCT [14]) was introduced in August 2012 and recruited 129 trainees in the first two years. In 2014 the total number of posts available for recruitment in England, Wales and Northern Ireland increased to 112 and 240 candidates were shortlisted for interview. The availability of training places and jobs is linked to planned local needs and what the service can afford.

In 2016, the competition ratio [21] for Core Medical Training [22] CT1/ST1 was 1.53 and for Anaesthetics training it was 2.09. For ACCS training it was 2.21, and for ST3/ST4 it was 1.59 (NHS specialty training, 2016). [23]
