

Medical engineering

Medical engineering refers to the process of checking medical equipment to make sure it's working properly and is safe to use.

Hospitals use an increasingly wide range of medical equipment in order to deliver healthcare services. This ranges from simple devices such as nebulisers to deliver treatment for [respiratory](#) ^[1] patients through to sophisticated [radiotherapy](#) ^[2] linear accelerators for cancer treatments and other cutting-edge technologies.

Working life

All medical equipment needs to be checked to ensure it is working correctly and safe for patients and it is the role of healthcare science staff working in medical engineering to do this.

It isn't just safety checks and maintenance, though. In medical engineering, you'd also get involved with the entire equipment lifecycle, including:

- acceptance testing of new equipment
- introducing equipment and devices into service
- advising on the correct use of equipment
- addressing patient safety issues
- safely disposing of old devices

Medical engineering is a really exciting and varied role where you'll use your expertise in electronic or mechanical engineering to undertake these activities and perhaps become involved in modifying or constructing equipment as well.

As a practitioner you'll be undertaking a hands-on role with medical devices, working with a wide range of equipment commonly encountered in the hospital environment. You might specialise in certain types of equipment such as that used in renal or [radiotherapy](#) ^[2] treatment, for example.

As a clinical scientist you can specialise in [medical device risk management and governance](#) ^[3] where the role will be more focused on the effective management of equipment, for example ensuring equipment is replaced in a timely fashion and that risks associated with the use of equipment are minimised. Both roles complement each other and collectively contribute to

patient health and wellbeing.

Who will I work with?

Clinicians increasingly rely on the skills of healthcare science staff in medical engineering and so you will regularly liaise with other [scientists](#) ^[5], [nurses](#) ^[6], doctors and healthcare professionals as part of a multi-disciplinary team, all working for the benefit of the patient.

- **Where the role can lead**

With further training or experience or both, you may be able to develop your career further and apply for vacancies in areas such as further specialisation, management, research, or teaching.

Healthcare science staff often work at the forefront of research and innovation, so that patients are continually receiving the very best healthcare. For example, in medical engineering, healthcare science staff are developing new breast screening technology which could be safer than traditional mammogram x-rays.

- **Pay and conditions**

Most jobs in the NHS are covered by the Agenda for Change (AfC) ^[50] pay scales. This pay system covers all staff except doctors, dentists and the most senior managers. As a healthcare science practitioner, you'd usually start on band 5, with opportunities to progress to more senior positions. Trainee clinical scientists train at band 6 level, and qualified clinical scientists are generally appointed at band 7. With experience and further qualifications, including Higher Specialist Scientist Training ^[51], you could apply for posts up to band 9.

Staff will usually work a standard 37.5 hours per week. They may work a shift pattern. Terms and conditions of service can vary for employers outside the NHS.
