

Compare roles in health

Not sure where to start with the hundreds of NHS careers? Use our compare roles section to get bite-size information on the entry requirements and training, pay and conditions, prospects and skills needed of up to three roles. If there is something that you think you could do, then get more in-depth information on the role.

Don't forget, you can also save your role comparisons by registering with us.

Obstetrics and gynaecology [1]

Doctors in obstetrics and gynaecology (O&G) care for pregnant women and unborn children, and look after women's sexual and reproductive health.

Training and qualifications required

Training usually starts with a five year first degree in medicine, MBBS. 2 years foundation doctor training, 7 years specialist training (ST1-7). This period of training will include your royal college exams. Length of training can vary according to your circumstances.

Expected working hours and salary range

Doctors may work up to 48 hours a week. The working hours may sometimes extend beyond the normal working day to include early mornings, evenings, weekends and on call. The basic salary ranges from £29,384 to £34,012. Once you start your specialty training as an O&G doctor employed by the NHS, you can expect to earn a salary of at least £40,257, which can increase to between £84,559 and £114,003 as a consultant.

Desirable skills and values

You'll need excellent communication skills to manage a wide range of relationships with colleagues, and patients and their families. You'll be emotionally resilient, have excellent problem-solving and diagnostic skills and work well in teams and under pressure. You'll also be very organised for the benefit of patients. As an obstetric and gynaecology surgeon, you'll have: a high degree of manual dexterity; superb hand-eye coordination; excellent vision; visuospatial awareness and the physical stamina to cope with the demands of surgery.

Prospects

In 2020 there were 672 applications for 256 places on O&G specialty training. You could specialise or conduct research in areas such as fertility care or high-risk obstetrics, teach medical or postgraduate students, or get involved in research.
