

Compare roles in health

Not sure where to start with the hundreds of NHS careers? Use our compare roles section to get bite-size information on the entry requirements and training, pay and conditions, prospects and skills needed of up to three roles. If there is something that you think you could do, then get more in-depth information on the role.

Don't forget, you can also save your role comparisons by registering with us.

• Telephonist/switchboard operator ^[1]

Telephonists/switchboard operators are a key point of contact for our patients in making sure they and their families can speak to relevant departments about their care.

Training and qualifications required

There are no set entry requirements to become a telephonist or switchboard operator. Employers usually expect good literacy, numeracy and IT skills. They may ask for GCSEs or equivalent qualifications and often ask for relevant work experience. Even where this is not specified, it would be an advantage if you have worked in customer service or admin. You will get the training you need to do the job. This includes an introduction to the department, how to use the IT and phone equipment and the procedures to follow. You may also have training in customer care and the chance to take qualifications from organisations including AMSPAR and the BSMSA.

Expected working hours and salary range

Administrative staff in the NHS are paid on the Agenda for Change (AfC) pay system. As telephonist/switchboard operator, you'll typically be on AfC band 2. With further training and qualifications, you may be able to apply for team leader or junior supervisory level posts at band 3 for example. Telephonists/switchboard operators work standard hours of around 37.5 a week. Some staff may work shifts, which could involve nights, early starts, evenings and weekends. Terms and conditions will be different for administrative staff working outside of the NHS.

Desirable skills and values

As a telephonist/switchboard operator, you'll need to be friendly and welcoming, patient and understanding, follow instructions and procedures, work accurately and methodically, work well in a team but use your own initiative, use IT/communications equipment, work with all types of people, deal with people who may be angry or upset, and be confident using the phone. You'll also need good organisational, IT and communication skills, have excellent customer service skills and a good telephone manner.

Prospects

With experience, you could become a team leader, coordinating the work of a team of staff. With further experience, you could become a manager, responsible for the staff in a department. Some telephonists/switchboard operators move into specialist roles such as medical secretary or PA. Others move into areas such as finance or HR. You may also have the opportunity to move into informatics, specialising in electronic data, or into IT.

- Administrative management [3]
- Medical secretary/personal assistant [4]
- Practice manager [5]

• Clinical neurophysiology [6]

Clinical neurophysiologists investigate and diagnose disorders of the nervous system including a range of conditions affecting the functioning of the muscles (neuromuscular disease).

Training and qualifications required

Training usually starts with a five year first degree in medicine. You'll then complete two years of foundation training and two years of core training (CT1-CT2), followed by four years of specialty training (ST3-ST6). This period of training will include your royal college exams. Length of training can vary according to your circumstances.

Expected working hours and salary range

Doctors may work up to 48 hours a week. The working hours may sometimes extend beyond the normal working day to include early mornings, evenings and on call. You'll first earn a salary when you start your foundation training after medical school. The basic salary ranges from £29,384 to £34,012. Once you start your specialty training as a neurophysiologist employed by the NHS, you can expect to earn a salary of at least £40,257, which can increase to between £84,559 and £114,003 as a consultant.

Desirable skills and values

You'll need excellent communication skills to manage a wide range of relationships with colleagues, and patients and their families. You'll be emotionally resilient, have excellent problem-solving and diagnostic skills and work well in teams and under pressure. You'll also be very organised for the benefit of patients.

Prospects

In 2020 there were 31 applications for 10 specialty training places. There are currently 106 consultants working in the NHS in this specialty. You could specialise or conduct research in areas such as epilepsy surgery or Parkinson's disease or teach medical or postgraduate students.
