Roles in pharmacy: Pharmacist

1 of 3

As a pharmacist, you combine your expert knowledge of medicines and health to provide care to patients with all types of health conditions.

Pharmacists advise patients on minor ailments, help patients manage long-term conditions and screen medicines for safety, appropriateness and clinical effectiveness.

You supervise pharmacy technicians and pharmacy assistants and work as part of a multidisciplinary team advising health care professionals such as doctors and nurses on the best medicines and care.

Many pharmacists can prescribe medication to patients after careful assessment. They are responsible for clinical decisions about them and how they manage their condition.

Where will you work?

You might work as part of a healthcare team in a hospital or community pharmacy. Or you could work in industry, research or a wide variety of other settings.

Entry Requirements

To practise as a pharmacist you need to study for an accredited Masters degree in Pharmacy (MPharm) at University. After a further one year placement you will be registered with the General Pharmaceutical Council (GPhC).

Roles in pharmacy: Pharmacy technician

2 of 3

Pharmacy technicians are senior members of the pharmacy team who manage and prepare medicines as well as provide advice to patients.

Pharmacy technicians engage with patients, offering advice and treatment options.

You are often involved in taking medicine histories from patients and giving advice on treatment options. You might also manage the supply of medicines and liaise with other members of the healthcare team.

Many pharmacy technicians are authorised to complete the final check of dispensed medicines.

Where will you work?

Pharmacy technicians work as part of healthcare teams in hospitals, GP surgeries and community pharmacies, but also in prisons, the armed forces and industry.

Entry Requirements

To practise as a pharmacy technician, you will need to find employment as a pre-registration pharmacy technician. You will receive on the job training usually over 2 years and complete an approved Level 3 qualification.

Upon completion, you will be registered with the General Pharmaceutical Council (GPhC).

Roles in pharmacy: Pharmacy support staff

3 of 3

If you have an interest in people's health, good communication skills and a methodical approach to work then a role as a pharmacy assistant could be for you.

Pharmacy support staff assist in dispensing prescriptions, ordering stock, selling over-the-counter medicines, and many other tasks under the direction of the pharmacist.

You'll be dealing with patients and will need excellent communication skills.

You'll receive training whilst working and be enrolled in a training course working towards a nationally recognised pharmacy services qualification at minimum RQF level 2 or SCQF level 5 in Scotland.

Where will you work?

You might work as part of a healthcare team in a hospital or community pharmacy. Or you could work in a wide variety of other settings.

Entry Requirements

There are no set entry requirements to become a pharmacy assistant. Employers usually expect good literacy, numeracy and IT skills. They may ask for GCSEs or equivalent qualifications.

Where do pharmacy professionals work?

1 of 3

Hospital

As a hospital pharmacy professional you are part of a large multidisciplinary team. You will rotate through various clinical specialties such as surgery, the heart (cardiology) or paediatrics (child health) before deciding to specialise in a particular area.

You will attend ward rounds with the team and you could run specialist clinics for patients.

- > [Hospital pharmacy career info](#)
- > [Amy's story](#)
- > [Chloe's story](#)

Industry

As a pharmacy professional in industry you'll work in companies involved in manufacturing medicines, treatments or devices and technology.

You could be involved in clinical trials, helping to formulate drugs or develop papers which evaluate the safe and effective use of a medicine. Some pharmacy professionals work in more commercial roles in marketing or sales management.

Industrial pharmacy can be extremely rewarding, often leading to managerial positions and potential for foreign travel.

- > [Read more about Pharmacists in industry](#)

General practice

Pharmacy professionals in practice might review medication for patients with long-term conditions and run specialist clinics in areas like respiratory or diabetes. You could be involved in initiatives that encourage healthier lifestyles and support to improve the safety of medications patients take. You could have different levels of contact with patients, for example telephone/video consultations to give advice on medications as well as face to face conversations.

Academia

Academic pharmacy offers a range of possibilities including leading research and delivering innovative teaching. You will have opportunities for leadership roles such as senior university management, or professional engagement such as contributing to national and international pharmacy policy. You will work with students and help them realise their aspirations.

Universities offer an intellectually stimulating and highly creative work environment.

- > [Read more about academic pharmacy](#)

Procurement

Procurement involves buying medicines before we can give them to patients. This involves working with manufacturers who can make a medicine to meet a specific patient's need, for example a liquid medicine for a patient who cannot swallow tablets.

As a pharmacy professional working in procurement you'll need an understanding of how medicines are made, the law that applies to manufacturing medicines and procurement law all alongside your clinical knowledge.

> [Read more about mental health and pharmacy](#)

Mental health

Pharmacy professionals in mental health work closely with patients, as well as doctors, nurses and psychologists to ensure patients receive the ideal medicine to improve their mental well-being. Treatment is often complex, and it is important to consider physical health conditions and what the patient wants when advising on therapy.

> [Careers info for working in a care home](#)

> [Guide to pharmacy in care homes](#)

Care homes

Pharmacy professionals working in care homes are there to provide services for residents who are not able to care for themselves – a role which many pharmacy professionals find very rewarding.

You would work as part of a team with responsibility for medicines within the care home, ensuring that residents are able to get the most of out their medicines.

Research

Pharmacy professionals working in research are involved in creating new treatments and evidence.

As well as working in drug discovery and drug delivery, you could conduct research to inform guidelines and best practice.

> [Read about life as a prison pharmacist](#)

Health and justice

Health and justice settings include prisons, immigration removal centres, young offender institutions and secure children's homes. These sites will usually have a pharmacy that provides medicine, a primary care centre and will offer a range of public health services.

You will deliver patient facing services including prescribing and reviewing medication whilst working with the multidisciplinary team.

> [Read more about remote services](#)

NHS 111

NHS 111 provides 24/7 care to the public simply by dialling 111. As a pharmacy professional, you will work alongside GPs, paramedics, mental health nurses and more.

You will support patients by sharing expert pharmaceutical knowledge, helping manage their conditions, signposting to other services or providing reassurance through home management advice. There are opportunities to undertake work remotely, at other sites or at home.

Opportunities in pharmacy

2 of 2

Leadership and management

There are many leadership and management opportunities for pharmacy professionals. You may aspire to become a chief pharmacist of a hospital or a superintendent pharmacist of a pharmacy. Alternatively you may wish to work at a national organisation leading on change or responsible for delivering a programme of work.

- > [A day-in-the-life of a chief pharmacist](#)
- > [Careers advice from a superintendent pharmacist](#)

Genomics

Genomics is the study of the body's genes and their functions. It helps us better understand health, disease and how people respond to different treatments.

Pharmacy professionals can use this information to personalise choice of medicines for patients. For example, targeted treatments for cancer or predicting risk of serious side effects from medicines.

This is an exciting new area for pharmacy.
