General Practice (GP) training pathway  
(Royal College of General Practitioners - RCGP)

This is a run-through post.

MRCGP Examination – Applied Knowledge Test (AKT): 
Trainees who pass this assessment will have demonstrated their competence in applying knowledge at a level which is sufficiently high for independent practice.

MRCGP Examination – Clinical Skills Assessment (CSA): 
Simulating a typical NHS surgery clinic, the CSA assesses a range of scenarios from general practice relevant to most parts of the curriculum which can also target particular aspects of clinical care and expertise.

Prior to starting your specialty training you need to have completed a medical degree followed by the two-year foundation programme.
